ealth Services Research and Development (AMA-HSRD) to provide comprehensive, detailed and acurate data on the entire physician population in the inted States. Characteristics of Physicians is related to on other AMA-CHSRD publications: Physician istribution and Medical Licensure in the United tates, and Medical School Alumni. This publication ffers from these in that more characteristics are deiled for smaller geopolitical units of analysis. Compenensiveness and detail do, however, have their cost. total of fifty-one volumes, one for each of the States at the District of Columbia, are required in order to resent these data.

operation between the AMA and the Bureau of ealth Manpower of the Department of Health, Educaon, and Welfare (DHEW). The AMA Physician fasterfile is the data source and considerable resources we been utilized by the AMA in developing the comiter programs and designing the volumes. Contract HRA-232-78-0163 with the Health Resources Adinistration of DHEW has provided the financial suport needed to print and disseminate these volumes. In ldition to the bound volumes, print tapes of the inforation contained in this report are available from the ureau of Health Manpower. Howard V. Stambler, irector of the Division of Manpower Analysis of the ureau of Health Manpower is the Contract Project Ofer. Views or conclusions contained in this study ould not be interpreted as representing the official pinion or policy of the Department of Health, Educaon, and Welfare.

Characteristics of Physicians was conceived by AMAland partially in response to passage of the National ealth Planning and Resources Development Act of 174 (PL #93-641). With passage of this legislation it came apparent that planning and regulation were to come integral components of the health care system in the United States.

The distribution of physicians also has been the obct of Federal legislative action for several decades. nec 1965, four separate pieces of legislation each atmpting to effect a different distribution of health anpower resources have been enacted by the federal yernment. The most recent of these is the Health Prolocating in designated shortage areas has been strengthened. Directly related to health manpower legislation is the designation of shortage areas. Are the criteria for designating shortage areas appropriate? Are those areas designated as such really experiencing shortages? These issues and related ones have not been resolved.

The Characteristics of Physicians series is an effort to

meet some of the data requirements inherent in nonmarket approaches to resource distribution and allocation. Assessment of specialty and location maldistributions, determination of physician shortage areas, and planning to ensure that health care needs are met require detailed data on relevant characteristics of the physician population. Data in the COP Series are made available with the expressed hope that they will be coupled with intelligent analysis and careful policy formulation.

Use of these data, however, will not be restricted to policy makers. In addition, individual physicians may utilize Characteristics of Physicians for making location and migration decisions, and medical societies may consult Characteristics of Physicians to ascertain the types of continuing medical education programs likely to be of interest to a large proportion of physicians in the region. Researchers in health care and in the social sciences have also repeatedly expressed a need for the type of data provided. Therefore, Characteristics of Physicians is being widely distributed in an attempt to meet the repeatedly expressed needs of numerous groups.

The efficacy of the market as an allocative and distributive mechanism for health care resources again is gaining supporters. It will be some time, however, before the desired incentives can be reintroduced into the health care market. Until that time, the AMA-CHSRD is attempting to ensure that all decisions relating to health personnel are based on the best data available and, thus, introduce as few distortions as possible.

Lynn E. Jensen Project Director and Director, Center for Health Services Research and Development

e contributed to the success of this endeavor everal years. The authors wish to thank Chris dore, Group Vice-President, Operations and nent Group, for his overall support of this proil from its conceptualization in 1976 to its com-Special appreciation goes to Lynn E. Jensen, of the Center for Health Services Research and nent, and Project Director, for his efforts in the project possible and in assuring the y of resources necessary to its successful com-Gene Roback of the AMA Survey Data Center pful advice and comments during concepon and throughout the term of this project. hneier and Raymond Healy, from the AMA of Computer and Information Services, proe programming expertise needed to complete Wendling and Glen Misek handled a number of tasks relating to verification, progress reports, and coordinating later phases of the preparation for publication; Arsenio Oloroso provided editorial advice through innumerable phases of publishing 50 seemingly indistinguishable state editions; Dorothy Pazur and Barnette Collins assumed day-to-day administrative tasks.

Finally, the authors also wish to thank Howard V. Stambler, Director, Division of Manpower Analysis, Bureau of Health Manpower, Department of Health, Education, and Welfare, and Project Officer, for his efforts to make publication and distribution of the volumes possible. Special appreciation goes to Lucy Kramer, Contract Liaison, for her work in coordinating publication and dissemination activities for the Bureau.

rmation on several key characteristics of physicians heir geographic distribution in the United States as December 31, 1975. This is the first American iical Association publication to present data for the health service areas (HSA's) designated under the onal Health Planning and Resources Development of 1974 (PL #93-641). There is a separate volume of For each of the fifty states and the District of Colia. Each presents state-specific detailed data for the service areas, demographic county groups, and nties, as well as summary national data for comtive purposes. Thus, the series provides the only patible data base on physicians across all areas and all de of significant use to practitioners and rechers in the health care industry.

he data presented here are for the physician populapracticing in the United States. Detailed characters are presented for all physicians with known adses in a geographic region who are professionally re. In addition, counts of physicians who are inacor are not classified are provided on each table. ecember 31, 1975 was selected as the point in time of

report for the following reasons;

PL #93-641 was signed in January, 1975, and it
was only during 1976 that significant activity was
undertaken in response to this legislation. Thus,
1975 represents the last year in which the health
care system was not affected by this major piece
of legislation and, therefore, is the most appropriate base year for future analyses of the impact of this legislation.

Because this represents the first statistical series
of its scope, an exceptional amount of time had
to be expended in the conceptualization of the
project, preparation of data set, and writing of
the necessary computer programs. However,
plans are being developed for publication of
these volumes on a more regular and current
basis in the future.

he introductory material which follows provides nitions and discussions of the geographic aggregas and the specific physician characteristics tabulated. s publication's relationship to other AMA publicas and to other data sources is detailed. In addition, American Medical Association Physician Masterfile escribed: a list of the health service areas covered in volume is given; and a sample of the questionnaire ch is sent to physicians for the purpose of updating AMA Physician Masterfile is included. Twenty-one es listed in the Table of Contents-six national es, which are repeated in all 51 volumes, and 15 e-specific tables providing: state, HSA, count ips and county data—follow immediately. An addial table which provides medical school data is inled for states having medical schools.

The Characteristics of Physicians series provides tabulations on the geographic distribution of all physicians in the United States as of December 31, 1975. Physicians who were temporarily in foreign locations are excluded from all tabulations. All data presented in this publication were developed from the American Medical Association Physician Masterfile.

Because the primary concern of policy makers and planners, in most instances, is the adequacy of health care services to meet the needs of the civilian population, many tables report Federal and Non-Federal physicians separately. In some geographic regions, inclusion of Federal physicians in the tables would provide an upward bias to the real supply of physician services available to the general population.

Geographical Units of Aggregation

Each volume of COP represents data for the United States as a whole; for the particular state; and the county groups, health service areas, and counties within that state. Each physician is allocated to a particular geographic location on the basis of his/her professional mailing address as recorded in the AMA Physician Masterfile.

The geographical subdivisions within the state require additional explanations. These follow immediately below.

County Group

The county group tables (Tables 13-15) use the Demographic County Classification based on Sales & Marketing Management, Inc.'s population estimates and Standard Metropolitan Statistical Areas (SMSA's) definitions. The SMSA's serving as the basis for county size groups 6 through 9 are based on the metropolitan area concept established by the United States Bureau of the Budget.1 An SMSA consists of the following: 1) a central city of 50,000 or more inhabitants; 2) the remainder of the county in which the central city is located; and 3) contiguous counties that are integrated economically and socially with the county containing the central city. The group 5 county classification includes "Potential SMSA's" as defined by Sales & Marketing Management, Inc. and are considered future candidates for SMSA status. The county classifications 1 through 4 include counties in nonmetropolitan areas. Table A below summarizes the 9 demographic county classifications.

The independent cities of St. Louis, Missouri; Baltimore, Maryland; Alexandria, Virginia; Hampton, Virginia; and Chesapeake, Virginia are treated as individual counties and assigned to the appropriate county group on the basis of the city's population. All other

^{&#}x27;Sales & Marketing Management, Inc. and the Bureau of the Budget use identical SMSA definitions except for a few instances in New England where the former uses the county unit rather than the township as the geographic boundary, SMSA's are defined as of 1975

	299	3,084	214,549,200
Counties in SMSA's with 5,000,000 or more inhabitants	3	16	23,537,100

Counties

(12-31-75)

e: Cities defined as independent are included in "number of counties" column.

rce: Louis J. Goodman, *Physician Distribution and Medical Licensure in the U.S.*, 1976 (Chicago: American Medical Association, 1977), p. 32.

Definition

pendent cities, largely those in Virginia, are incorted into the county which encompasses it. For ince, Princess Anne County in Virginia is referred to irginia Beach city. In addition, Kalawao County in rail is combined with Maui County and Alaska is led into four judicial divisions with assignment into opriate county group based on the population of udicial division.

alth Service Area

ssification

ne National Health Planning and Resources elopment Act of 1974 mandated the division of the into health service areas. One section of this ication, Tables 16-18, presents data on Non-Federal icians in health service areas located entirely or parwithin the state covered in this volume. States with e than one health service area within their bounes have tables for each health service area. In states re the entire state is designated a health service area. e is, of course, only one health service area table. ne existing Masterfile data were converted into the th service area classifications based upon the listing ealth service areas published in the September 2, , Federal Register and incorporate revisions by the etary of the Department of Health, Education, and fare through July 1, 1976. In most states, HSA's consist of an aggregation of counties. In some instances, however, (Alaska; Connecticut; Massachusetts; the city of Chicago; and the Navajo, Hopi, White Mountain, San Carlos, and Papago Indian Reservations) the health service areas were not composites of counties, but rather politico-legal boundaries. The exact political units used for each HSA are listed in Exhibit A

County

Selected characteristics of physicians by county for a specific state are listed in Tables 19-21. If no physicians are located in a county, that county is not listed in these tables. For some states, noncounty geographic areas are treated as counties where the geographic subdivisions used differ. This usage parallels the usage in the county group tables. The independent cities of St. Louis, Missouri; Baltimore, Maryland; Alexandria, Virginia; Hampton, Virginia; and Chesapeake, Virginia are treated as individual counties. All other independent cities, largely those in Virginia, are incorporated into the county which encompasses it. Princes Anne County in Virginia is referred to as Virginia Beach city, and Kalawao County in Hawaii is combined with Maui County. The four judicial divisions of Alaska are treated as counties.

hysician Characteristics

The distributions of physicians are described in this olume in terms of a number of professional charactertics, with some individual characteristics crossabulated with others. Key characteristics include pecialty, major professional activity, age, sex, board ertification, Federal or Non-Federal employment, and ate and county of graduation. The thirty-six specialty assifications used in this publication are the same as nose used in other AMA publications such as the Physiian Distribution and Medical Licensure in the U.S., 976 and are presented in Table B. A physician's pecialty classification is defined as that in which he/she ports spending the largest number of practice hours. number of county tables utilize the classification stem of primary care/non-primary care specialists. rimary care physicians, for the purposes of these ibles, are physicians whose specialty is general pracce, family practice, internal medicine, pediatrics, and bstetrics/gynecology. Another area of general interest specialty board certification. Certification indicates at the physician has satisfactorily completed an exmination in an area of specialization and has taken all of the specific training requirements for certification by a specialty board.2 The licensed physician is free to practice any specialty regardless of whether the physician is board certified or not. Tables in this publication indicate board certification in some specialty but not necessarily the specialty in which the physician is classified. However, over 90 percent of the physicians reported as board certified are certified in the specialty in which he/she is classified.3

Physicians' professional activity by specialty is used to assess the availability of patient care. Therefore, professional activity is reported by patient care, and subgroups of patient care on the basis of "office based

^{2 &}quot;The boards are in no sense educational institutions, and the certificate of a board is not to be considered a degree. It does not confer on any person legal qualifications, privileges, nor a license to practice medicine or a specialty. The boards do not in any way interfere with or limit the professional activities of a licensed physician, nor do they desire to interfere in the regular or legitimate duties of any practitioner of medicine." Liaison Committee on Graduate Medical Education, Directory of Accredited Residencies, 1977-78. (Chicago: American Medical Association, 1978), p. 367.

³ AMA Physician Masterfile, 1976. Special Tabulations. Division of Survey and Data Resources, American Medical Association.

ivity categories—inactive and not classified eved further clarification. Inactive physicians are who have reported to the AMA via the Physician's sional Activity questionnaire that they are either semi-retired, permanently disabled, temporarily practice, or not active for other reasons. Physiho are categorized as not classified are those for the AMA has not received any information as to upe of practice and present employment.

nitions of the two other classifications used in ing physician characteristics are: Age as defined is of intervals of under 35, 35 to 44, 45 to 54, 55 to 75, and 75 and over; Federal employment as a semployment by the Veterans Administration, y Services, the U.S. Public Health Service, and Federal Service.

medical education background of physicians is eed in several forms. Physicians who graduated Inited States medical schools are categorized by ool of graduation and the state in which they curare practicing medicine. In addition, physicians in a particular county group or county within a re cross-categorized either as having graduated medical school in the state, in a contiguous state, e other state, in Canada, or outside the United and Canada.

RELATIONSHIP TO OTHER IERICAN MEDICAL ASSOCIATION PUBLICATIONS AND TO THE COOPERATIVE ALTH STATISTICS SYSTEM (CHSS)

ough previous AMA publications, Physician ution and Medical Licensure in the U.S., and il School Alumni, have reported similar informatharaceteristics of Physicians provides more detailormation than previously available in published

publication has two key features: greater detail of ans' characteristics and greater detail with to geographic units. More detail is provided for stributions, sex, and specialty board certificator states, county groups, individual counties, r the health service areas. Thus, this publication ts to meet a more extensive set of data needs not other AMA publication series.

ata collection effort to provide information to the data published in Characteristics of Physisbeing undertaken by the Cooperative Health cs System (CHSS). Although this system evens to collect data on a state-by-state basis for thiralth related occupations, reports published as a of CHSS have not contained the level of detail

statistics for individual HSA's and counties, age and specialty distributions by county, and specialty and age distributions for Federal physicians. Further, because the CHSS collection effort relies on 50 separate agencies, uniformity in quality and effort is not assured. And indeed the CHSS is collecting physician data in only a limited number of states at this time.

INTERPRETATION OF TABLES

Because of the complexity and detail of the data presented in these volumes, care must be exercised in their interpretation. A few explanatory words are necessary about the treatment of the physician classifications used in these tabulations.

As mentioned previously, it was felt that data on professionally active physicians would be most useful for research and planning purposes. At the same time, however, it was felt that the total pool of physician manpower should be represented in these volumes. This dual purpose caused some problem in the design of certain tables because of the inactive and not classified activity categories. These two categories are included in the tabulations but are treated differently depending on the type of cross-tabulation involved. Generally, in tables in which specialty is cross-tabulated with major professional activity, the inactive and not classified physicians are included in the total value but are not distributed by specialty. Instead, these two values are provided at the bottom of the specialty column under "Inactive," "Non-classified," and "Address Unknown". To arrive at the total value, the inactive and not classified values should be added to the sum of the other major professional activity categories. This applies to Tables 1, 3, 6, 9, 16, and 19.

Address Unknown

Physicians with unknown addresses are included only in Table 1 for informational purposes. Again, this value is not distributed throughout the table but is included in the grand total. Physicians with unknown addresses are excluded from all other national tables; therefore the grand total value on Table 1 exceeds the total value of Table 2 plus the total in Table 3, and the total reported in Table 4.

Availablity of Data

This concludes the description of data contained in the COP series. Every effort has been made to provide the most frequently requested information in a manner meaningful to most users. These data are also being made available in the form of print tapes from the Bureau of Health Manpower. In addition, plans are also underway to publish the COP series on a regular basis.

⁴ These observations are based on a comparison of the Health Data Annual for Massachusetts and the Characteristics of Physicians: Massachusetts.

ile data collection has been an AMA activity for

ny years, the objectives, collection techniques, and of the data undergo constant review and have lergone considerable changes each year. A masterfile physicians has been maintained by the Association ce 1906. However, in the early days of its existence, Masterfile was primarily a listing of physicians intained as a record-keeping device for membership mailing purposes. Decisions were made on a day-tobasis without a unified approach and without ard as to what these decisions would mean in terms statistical methods and interpretation of the data. as research activities within the Association became re sophisticated, the complexity of data requirements reased. The Masterfile was, therefore, expanded and proved to meet these requirements. Today, the AMA vsician Masterfile is the most comprehensive and aplete source of physician data in the United States. ncludes information on every physician in the counmembers and non-members of the Association, on duates of American medical schools who are temarily practicing overseas, and graduates of foreign lical schools who are in the United States and meet s. education standards for primary recognition as sicians. Thus, all physicians comprising the total

sician Masterfile.⁶ a file is started on each individual upon entry into lical school or, in the case of foreign and Canadian duates, upon entry into the U.S. As a physician's ning and career develops, additional information is ed to the file-e.g., internship and residency trainlicensure board certification, professional affiliais, and other characteristics. Although such racteristics change over time, they are not subject to stant change. These types of characteristics are inled in the "historical" portion of the Masterfile. In ition, there is the "current professional activities" tion of each physician's record that identifies his ent address, professional activity, specialties, and ployment status. By definition, this current portion he Masterfile is subject to constant change and must apdated through intense monitoring techniques.

sician manpower pool are included on the AMA

rior to 1966, physician classification by specialty, vity, and employment was made through the ssification of Professional Activities (CPA) system, ch was based upon a "private practice/not in ate practice" concept. Data were collected under system via a short postcard-type questionnaire enmittee on Vital and Health Statistics stated in 1964 that:

The ongoing series on physician characteristics being conducted by the American Medical Association meets the need for data on...geographic location, age, sex, and specialty. For principal activity, however, the AMA inquires about major activity without specifying as to direct care of patients. Until queries relating to the number of patients seen or hours worked in each activity are made, physician manpower cannot be properly allocated among different activities.

This recommendation gained extensive consideration in 1966 when the then AMA Department of Survey Research, which has been replaced by the Department of Statistical Analysis and is now a part of the AMA Center for Health Services Research and Development, began its efforts to update, improve, and expand the AMA Physician Masterfile. In its evaluation of the data base, it identified four major limitations in the CPA classification system:

- Existence of categories which were not mutually exclusive, resulting in confusion and duplication between and within activity, specialty, and employer categories.
- Lack of a criterion upon which to base classification.
- Lack of information on the most recent update of each individual record.
- Unavailability of information on response rates for the annual verification questionnaire.

These deficiencies were of sufficient concern to warrant major revisions in both the structure of the file and the data collection procedures. Therefore, a four-year project (the Reclassification of Physicians Project) was initiated to redesign the classification system. AMA undertook the Reclassification Project in cooperation with the National Center for Health Statistics of the United States Public Health Service, the Branch of Demographic Surveys of the U.S. Bureau of the Census, and knowledgeable researchers in academia.

The first step in reclassification was the restructuring of the format of the 1966 edition of the Distribution of Physicians, Hospitals, and Hospital Beds, a publication of the AMA Center for Health Services Research and Development. Through a series of computer programs, the old Masterfile category "private practice/non-private practice' was converted to the more functional "patient care/other professional activity." While the 1966 format changes constituted a step in the right direction, an important deficiency in the published profile of the physician population remained: data were still being collected under the old classification method. It became obvious that the data collection procedures had to be revised to correlate with the new classification

is section draws heavily from: Goodman, L.J. Physician Distrition and Medical Licensure in the U.S., 1976. Chicago: American dical Association, 1977.

discussion of validation studies conducted on the AMA Physin Masterfile, see Goodman, L.J., and Eisenberg, B.S., "The ality of Physician Data." Public Data Use, 5 (May 1977): pp. 42

new questionnaire was first used in 1968 in the survey of 317,000 physicians. Each physician ked to indicate the average number of hours per typical week in several areas within three ies—Professional Activities, Specialization, and Employment Status. The use of a "time spent" gave the physician a criterion upon which to his practice, and the confusion between and the activity and employer categories was ted. After five mailings a usable response of 87.4 was attained.

returned questionnaires were passed through a fo clerical editing procedures and a quality control oint. They were then keypunched and the data sed through a series of computer programs which d the activity, specialty, and employment classin to each physician record.

emplete census was scheduled to be conducted hree years. However, in order to verify the inforgathered in 1968 under the new system, a comensus of 325,000 physicians was made again in The questionnaire, structurally the same as that of contained the physician's 1968 response with a provided for corrections or changes. A usable se rate of 86.8 percent was attained. Analysis of sets of data revealed that the data collected in ere consistent with that of 1968, therefore, conthat the questionnaire used to gather the data eliable survey instrument. The most recent comensus, for the purpose of this project, was conin 1973. The 1973 questionnaire is identical to ed in 1969 except for the addition of a section reg address and other general information. The response rate was consistent at 86.8 percent . A of the questionnaire used in the 1973 census is ted in Exhibit B.

updating system keeps the Masterfile currenthysician's record is dated to reflect the most relange, which may be obtained for AMA mailings
plications, company mailings, physician corrence, or hospitals, government agencies, medical
s, medical agencies, medical societies, specialty
, and licensing agencies. Any indication of a
in professional status or address triggers a quesre similar to the one used in the 1973 census. The
an is placed on a "change" file while follow-up
gs are made to raise the response rate. In 1975,
imately 3,500 weekly change questionnaires were
per week.

een census years, a comprehensive computerized

n additional check on the Masterfile between cenars, the AMA's Center for Health Services ch and Development conducts year-end computer A comparison of 1972 and 1973 year-end data the same consistency as the complete census data 3 and 1969. A similar comparison was conducted completion of the 1977 census. The reliability of testerfile was evaluated when the Center prepared: Graduates, as well as reports on AMA membership, physician manpower, women physicians, and specialty society statistics.

While the data collected for the Record of Physicians'

Professional Activities questionnaire represent a major input to the AMA Physician Masterfile, data from other sources are also incorporated. These other sources include:

- Medical Schools—Provides data on school and year of graduation, birthplace, birthdate, and professional appointments.
- State Licensing Boards—Provides licensure status of physicians.
- Hospitals—Provides information on interns and residents, birthplace, and foreign medical graduates in training.
- Department of Defense—Provides data annually on physicians in government service.
- American Specialty Boards—Provides data on board certification of physicians.
- Medical Societies—Provides data on membership in specialty, state, and county societies.
- Educational Council for Foreign Medical Graduates—Provides data on foreign medical graduates.

While many sources provide data for inclusion into the Masterfile, data are also often extracted from the Masterfile for use by these agencies. In addition, the Masterfile is used by the National Center for Health Statistics; the Office of Emergency Preparedness in the Office of the President of the U.S.; the Office of the Secretary of DHEW; the National Institutes of Health; various other federal, state, and local government agencies; numerous universities and medical schools; state, county, and specialty medical societies; the pharmaceutical industry; and ten addressing companies.

EXHIBIT A:

HEALTH SERVICE AREA DESIGNATIONS JULY 1, 1976

The National Health Planning and Resources Development Act of 1974 (PL #93-641) mandated that health service areas be established throughout the United States. The legislation specified that each health service area meet the following requirements:

 The area must be a rational geographic region, containing a comprehensive range of health services, and of a character suitable for the effective planning and development of health services.

⁷Committee on Interstate and Foreign Commerce, National Health Policy, Health Planning and Resources Development Act of 1974. Report No. 93-1382. (Washington: Government Printing Office, 1974).

tion between 500,000 and three million, with the following exceptions: the population may exceed three million if the area includes a standard metropolitan statistical area (as determined by the Office of Management and Budget) with a population of more than three million persons; and the population of an area may be less than 500,000 in unusual circumstances, but not less than 200,000 except in highly unusual circumstances if the Governor of each state in which the area is located determines, with the approval of the Secretary, that the area meets the other requirements of this subsection. "Unusual" and "highly unusual" in regulations.

4. To the maximum extent feasible, the boundaries of the health service area must be coordinated with the boundaries of Professional Standards Review Organizations, existing regional planning areas, and State planning and administrative areas.

Each standard metropolitan statistical area (SMSA) must be entirely contained within the boundaries of one health service area unless the Governor of each State in which a SMSA is located determines, with the approval of the Secretary, that a health service area should contain only part of the SMSA in order to meet the other requirements of this subsection.

The 205 Health Service Areas designated in July 1976 * are the definitions used in this publication. A listing of the HSA's and the counties, towns, or cities comprising them for the state treated in this volume follows below.

WEST VIRGINIA

The State of West Virginia is designated as a single Health Service Area.

Designated under the National Planning and Resources Development Act of 1974

PROFESSIONAL ACTIVITIES

DIRECTORY OF PHYSICIANS

Center for Health Services Research and Development

AMERICAN MEDICAL ASSOCIATION

535 N. Dearborn Street Chicago, Illinois 60610

Dear Doctor:

Please complete this questionnaire as soon as possible so that your official record is up-to-date with correct and current information for printing of the 1973 AMA DIRECTORY. Data obtained from this questionnaire will be aggregated and used to describe the distribution of physicians and to analyze health manpower. However, NO information from your record will be released to any organization for the purpose of developing independent physician data files.

Thank you.

Instructions

- 1. Please answer every question on the basis of your current activities,
- Indicate any changes. Information which you provided previously has been printed in this form. Please <u>complete</u> unanswered sections and make <u>discrete changes</u> where applicable.
- Upon completion, return the questionnaire at your <u>earliest possible con-</u> venience, using the preaddressed envelope.

Contents

The questionnaire is divided into four sections:

- Professional Activities—the types of activities in which each physician spends the most time during an <u>average week</u>.
- II. Specialization—the time physicians spend in their major fields of specialization.
- Present Employment Status—the number of hours per average week spent under various practice arrangements, by type of practice organization or employer.
- IV. Address and General Information

PROFESSIONAL ACTIVITIES QUESTIONNAIRE

1.	How many hours per week do you currently spend in a full-time TRAINING program as an intern or resident? Indicate whether you are a(n)		` ♣	
	1 INTERN 2 RESIDENT. (If you checked either of the boxes, please proceed to questions 6, 7, and 8 and answer, if applicable.)	HRS.	3 HRS.	_
2.	How many hours per week do you spend in PRACTICE INVOLVING DIRECT CARE OF PATIENTS? Direct care means seeing patients; however, it also includes patient services by such physicians as pathologists and radiologists.			
	Exclude time spent in training, teaching, or research. Include travel time and time spent on record keeping and other office work connected with your patients.	HRS.	4 HRS.	-
3.	How many hours per week do you spend on ADMINISTRATIVE ACTIVITIES, AS A SALARIED STAFF MEMBER OR EXECUTIVE OF AN ORGANIZATION? <u>Exclude time spent on record keeping and office work connected with management of your own practice Include activities connected with the administration or staff committees of a hospitel or other health facility or agency, clinic or group, or any other organization by which you may be</u>		ė	
	salaried as an executive or staff member.	HRS.	5 HRS.	-
4.	How many hours per week do you spend on MEDICAL TEACHING? Include hours spent in teaching as well as in preparation for subjects taught in medical schools, nursing schools, other hospital schools, hospitals, colleges, universities, or any other educational		A	_
	institutions. a. OF THESE HOURS how many do you spend on direct care of patients?	HRS.	HRS.	
	Exclude time devoted to patient care by house staff under your supervision. In view of possible overlap of hours spent in teaching and research, please do not double- count such hours, but report them instead in the most applicable category.	HRS.	7 HRS.	-
5.	How many hours per week do you spend on MEDICAL RESEARCH? All phases of investigating medical problems regardless of source of funds for such research. a. OF THESE HOURS how many do you spend on direct care of patients? Exclude time devoted to patient care by house staff under your supervision	HRS.	8 HRS.	-
6.	How many hours per week do you spend on any OTHER medical activities (not listed above) INVOLVING DIRECT CARE of patients?	HRS.	HRS.	_
7.	How many hours per week do you spend on any OTHER medical activities (not listed above) NOT INVOLVING direct care of patients?	HRS.	11 HRS.	-
8.	About how many hours per week do you spend in ALL PROFESSIONAL ACTIV-ITIES? Total of questions 1 through 7 (exclude 4a and 5a)	HRS.	12	The second second
~~	If you indicated "zero" on question 8, or if <i>none</i> of the above categories apply to you, please answer question 9.		1	994
9.	Are you: RETIRED 2 SEMI-RETIRED Total of Sec			
	equivalent to Section II, o Section III,	and to	otal of	
	TEMPORARILY not in practice	respe	cuvery.	
	Not active for other reasons (please describe)			
	Please cross out any prior information which is not applicable.			

If you do \underline{not} spend any hours on any particular activity below, so indicate by entering zero (0) hours in appropriate spacing.
